ZAP BI—Data Management and Analytics for Sage 500

An end-to-end data management and analytics solution that simplifies the journey to becoming a data-driven business.

KEY FEATURES

- Cloud, On-premises, or Hybrid, with pre-built, out-of-the-box, customizable data model for Sage 500
- Automated collection and integration of data from almost any source with Sage 500 data
- Enterprise-class analytics and dynamic role-based dashboards for Sage 500 are ready to go

BENEFITS OVER OTHER BI SOLUTIONS

- Avoid the cost and risk of a manual data warehouse project
- Easier to access data and get visibility from across the entire business
- Analytics to drive business success without expensive in-house technical experts

Traditional BI solutions only provide packaged front-end analytics, or 'canned' data marts. Expensive, manual projects are needed to collect and store data. The resulting proprietary data warehouses are often difficult to govern. This leads to the risk of poor data and security, undermining the information produced and return on investment.

ZAP BI goes beyond analytics. It is a data management and analytics platform that simplifies the complex process of becoming data-driven.

Pre-set automation reduces the technical effort of collecting, organizing and analyzing data. This means faster deployment and quicker time-to-value. The resulting governed data models need less maintenance, which reduces total cost of ownership. A graphical interface and powerful flexibility make it easy to customize to the most demanding needs and adapt to business change.

ZAP BI makes it easier for Sage 500 customers across all industries to manage their data and create accurate insight to drive success.

TRUST YOUR DATA   www.zapbi.com

BECOME A DATA-DRIVEN BUSINESS WITH ZAP

- Integrate disparate systems and data sources for one, consistent view of the business

- Easy to add cloud or on-premises data sources to continue to enrich business insight

- Aid future ERP upgrades with ZAPs migration capabilities

- Extend Sage 500 reporting and explore data across functional areas through dynamic dashboards

- Measure business performance with best-practice pre-set analytics

- Built-in data governance and administration tools provide control and peace of mind

- Deploy On-premises, on the Cloud or in a Hybrid model to align to technology strategy

- A scalable platform that grows in-line with business needs

GOVERNED DATA MODELING PLATFORM

Unlike many alternatives, ZAP is a unique enterprise data modeling and visualization web-application, offering:

- Strong data governance (quality, administration, data security, usage auditing)

- An automated 3-tier data architecture (staging, data hub, OLAP store)

- Many connectors to apps, files or cloud datasources

- Simple and intuitive UI for a wide range of user types

- Enterprise-grade data modeling

- Mature visualization, dashboarding and ad-hoc reporting

- Alerting, report distribution and printing (PDF, Excel)

- A responsive web application, optimized for mouse and touch on any device

COMPLETE DATA MODELS AND ANALYTICS

Why build or start from scratch when you can leverage ZAP's complete data solutions and give your organization better insights faster?

Get access to pre-built data models that can be easily customized and leverage pre-packaged calculations, analytics and role-based dashboards that you can use instantly, for every major domain:

- Finance (GL, AR, AP)

- Supply Chain (Sales, Procurement, Inventory)

TAILORED FOR SAGE 500

ZAP's support for Sage 500 goes beyond simply connecting and extracting data.

Our deep integration with Sage 500 improves the data modeling, deployment and overall users' experience. Thanks to ZAP's smart datasources for Sage 500, ZAP can deploy governed BI solutions that are integrated with Sage 500 in days, not weeks or months like other traditional tools. Below is an overview of the metadata ZAP extracts and other deep integrations with Sage 500:

- Metadata from AOM (localized captions, data types, enumeration fields)

- Optional fields support

- Geocoded addresses for map charts

- Multi-company & currency conversion in one data model

- GL account consolidation generation & security synchronization

- Merge multiple Sage instances

- Date dimension & automatic date relationships

ZAP & SELF-SERVICE BI TOOLS

ZAP understands you may have already invested in a different BI Visualization tool and may only be interested in ZAP's unique Data Intelligence solution. ZAP generates Trusted/Governed data stores that may be secured and combined with other data. It is a perfect fit with any Self-Service BI tool.
